  2018

Skills

- React.js
- JavaScript
- HTML5
- CSS3
- Node.js
- Express.js
- MongoDB
- Git
- GitHub

Language

- English
- Hindi

About Me

Aspiring MERN Stack Developer with a solid foundation in MongoDB, Express.js, React.js, and Node.js. Passionate about building scalable web applications and writing clean, maintainable code. Seeking an entry-level opportunity to contribute to innovative projects, collaborate with dynamic teams, and grow as a full-stack developer in a fast-paced tech environment.

Project

- **E-commerce Website**
  Built a full-stack e-commerce platform using the MERN stack (MongoDB, Express.js, React.js, Node.js).

  Implemented core features including user authentication (signup/login), product catalog, shopping cart functionality, and a mock checkout process.

- **Employee Management System**
  Designed and developed a CRUD (Create, Read, Update, Delete) application to manage employee records.

  Utilized React for the dynamic frontend interface and Express.js/Node.js for the backend API to interact with a MongoDB database.

Achievements

- **Team Leadership:**
  Directed small teams of 3-5 members during 3 college hackathons and group assignments, implementing agile methodologies to ensure all team members contributed code to group projects.

- **Project Owenership**
  Took full responsibility for academic and freelance web development projects from planning to deployment.

- **Peer Mentorship:**
  Helped peers understand React and Node.js concepts during lab sessions and online study groups.
